EDUCATION

Harcourt Butler Technical University **Kanpur, India**
B.Tech in Computer Science and Engineering (CGPA : 8.27/10) November 2020 - July 2024

EXPERIENCE

TCS In-Office
Software Developer September 2024 - Present

- Engineered and deployed **20+ production features**, resolving high-priority defects and improving system stability.
- Implemented Master Settlement Account feature, **reducing direct transactions by 40%** and improving efficiency.
- Migrated 20+ MT messages to ISO 20022 MX format, introducing 100+ attributes for high-value transaction processing.
- Developed and maintained Spring MVC services, improving development efficiency by 20%.
- Designed and developed **10+ Spring Boot microservices** using **Kafka-based messaging** for asynchronous high-value payment processing across distributed banking services.

AgiledCoders Remote
Software Developer Intern June 2024 - August 2024

- Delivered **30% of core website features**, resolved critical bugs using React.js, Node.js, PL/SQL, and Docker.
- Led a 3-member intern team, coordinating project execution and achieving 100% on-time delivery in an Agile environment.

PROJECTS

Online Shopping - JMSCommerce Live Demo GitHub May 2026 – Present

- **Built and deployed a production-ready full-stack e-commerce platform** spanning **8+ business domains** including Product, Variant, Cart, Order, Inventory, Review, Report, Customization, and Payment using Spring Boot, Spring Security, React, MySQL, Redis, and Razorpay.
- **Designed scalable, concurrency-safe order and inventory workflows** using atomic SQL updates, optimistic locking, transactional boundaries, inventory reservation/release to maintain data consistency and prevent overselling.
- **Engineered failure-resilient cart and payment workflows** using Redis-backed cart, inventory/pricing revalidation, Razorpay webhook verification, payment retries, and explicit payment states to handle duplicate callbacks and failures.
- **Containerized and deployed the application on AWS using Docker**, hosting backend services on **EC2** and integrating **S3** for media storage, with JWT/OAuth authentication and environment-based production configuration.

Quora Backend - Scalable Q&A Platform GitHub

- **Built a scalable Q&A backend** using Spring WebFlux and MongoDB, implementing **cursor-based pagination** for question feeds and **offset-based pagination** for search results.
- **Designed asynchronous view and like-count processing** using Kafka to decouple high-frequency engagement events.
- **Integrated Elasticsearch** for search across question/answer, enabling efficient search beyond MongoDB's basic query.

SKILLS

Languages & CS : Java, C++, JavaScript, System Design (HLD/LLD), OOP, DBMS, DSA
Backend : Spring Boot, Spring AI, Node.js, REST APIs, Kafka, Redis, RAG, MCP, Prompting
Databases & Cloud : MySQL, MongoDB, AWS, Docker
Frontend & Tools : React.js, HTML/CSS, Git, Postman, Swagger

ACHIEVEMENTS AND CERTIFICATIONS

- Demonstrated strong problem-solving skills with a Specialist rating (**1470**) on **Codeforces** and achieved 4 star status (**1835**) on **CodeChef** through consistent performance
- Distinguished as a **Knight** on **LeetCode** with a **1942** rating, highlighting expertise in data structures and algorithms.
- **CodeVita Season 11 Round 2: Global Rank 251 (Top 1%)** [Cetificate] and **CodeKaze Sept'23: AIR 139** among 30K+ participants [Cetificate].
- Solved **2000+ DSA problems** across CodeChef, Codeforces, LeetCode, and GeeksforGeeks.
